Alisa Petrova

B2B Sales & Solutions

Consultative selling | Technical presales | Enterprise software

> Customer-facing technology professional with B2B presales and ongoing client-support experience, backed by software engineering, systems analysis and production ownership.

At Revvy, I helped clients assess product fit before purchase, demonstrated capabilities, agreed feasible delivery scope and owned integrations. Continued collaboration led to additional paid features. Now focused on consultative B2B sales for software and AI products.

EXPERIENCE

Alfa-Bank

01.2026 — Present

Corporate brokerage technology | Business alignment and delivery

Senior Systems Analyst

Clarify business needs and explain solution options for corporate brokerage services, helping stakeholders and engineers agree on feasible scope and expected behaviour.

Coordinate a seven-person team across iOS, Android and backend development, clarifying scope, assigning tasks and aligning participants on delivery.

Translate business decisions into requirements, API contracts and acceptance criteria, identifying dependencies, edge cases and delivery risks before implementation.

Helped deliver the first production release by working with the team to resolve a document-signing issue. Defined business scenarios and data collection for application metrics now used in production.

Revvy

05.2023 — 12.2025

B2B presales, integrations and client support | Concurrent with CRS through Oct 2025

Senior Backend Developer

Through discovery and product demonstrations, helped healthcare and veterinary clients prioritise appointment notifications and related workflows for their initial purchase; worked with a branch manager on a medical-network pilot.

Owned integrations with Renovatio and Vetmanager, coordinating directly with customer stakeholders and external platform teams to align requirements and resolve integration constraints.

Scoped enhancements, agreed delivery timelines and pre-purchase proof-of-concept boundaries, and coordinated next steps with clients and the product manager.

Continued as the technical point of contact after purchase, helping define additional paid features. Upsell functionality initially deferred in favour of core workflows was subsequently implemented.

Held end-to-end ownership of a business-critical messaging service supporting approximately 4,000 concurrent instances and around 1,000,000 messages per day.

- Product Demonstrations
- Solution Scoping
- Technical Account Support
- Stakeholder Management
- International Collaboration

EXPERIENCE - CONTINUED

Revvy

05.2023 — 12.2025

Messaging reliability and external systems

Engineering ownership | continued

Took over a minimally functional service and redesigned its architecture, data storage, and scaling approach. Fixed memory leaks in the Baileys open-source library and reworked message processing with controlled retries, batching, and workers.

Moved message caching from MongoDB to Redis, relieving database overload and restoring stable operation.

Combined Ratio Solutions (USA)

05.2022 — 10.2025

US enterprise insurance platform | English-speaking stakeholder collaboration

Software Developer / Business & Systems Analyst

Worked directly with US business stakeholders to clarify needs, discuss solution constraints and align delivery plans for an enterprise insurance platform. Working language: English.

Turned ambiguous requests into functional and non-functional requirements, clarified dependencies and supported developers throughout implementation.

Redesigned JSON data exchange across the backend, frontend, and Azure Functions, reducing loading time for complex insurance policies from approximately 20 to 5 seconds.

Contributed to legacy-system decomposition into microservices, defining service boundaries and API contracts while preserving compatibility across teams.

Supported the team lead in architectural discussions, task decomposition, and sprint planning; conducted code reviews and mentored junior developers.

Independent product work

Selected projects

Product definition and AI-assisted delivery

Defined product requirements, UX, architecture and acceptance criteria for desktop applications; AI coding agents produced the implementation under my direction.

WritersStudio, a local-first writing workspace, reached public Windows beta in October 2026. Also created an HTML CV toolkit with reusable templates and guidance for non-developers.

DevExpress

02.2022 — 04.2022

Also known as DeveloperSoft. Developed PDF bookmark functionality using C# / WPF. The company exited the Russian market.

XCritical

2021 — 2022

Trainee C# Developer, contributing to development tasks.

TECHNICAL FOUNDATION

C# / .NET · Node.js / TypeScript · REST APIs & Integrations · System Architecture · SQL / MongoDB / Redis · Azure · React / Angular · AI-assisted Development

ENGINEERING PRACTICE

Production troubleshooting and reliability

API contracts and compatibility

Requirements and acceptance criteria

Code review and mentoring

Performance optimisation

EDUCATION

Swiss International Institute Lausanne (SIIL)
Bachelor of Science in Information Systems and Technology · 180 ECTS · 2022–2025

Saint Petersburg Electrotechnical University “LETI”
Faculty of Computer Technologies · 2020–2022 · Full-time · Not completed due to relocation
