Alisa Petrova

Technical Product Owner

Engineering leadership · Product ownership · Business–technology strategy · International experience

> Technology professional with over four years of full-time experience across software engineering, enterprise systems, product development, and technical leadership. My career has progressed from hands-on engineering into roles focused on technical leadership, product development, stakeholder collaboration, and delivery.

I combine a strong technical background with experience coordinating teams, defining product behaviour with business stakeholders, and translating business goals into delivery plans across enterprise environments and startups.

I currently coordinate a seven-person team developing a mobile brokerage product for corporate clients at Alfa-Bank. Earlier roles included business-critical service ownership, mentoring, and direct B2B client communication.

I am developing my expertise at the intersection of technology, artificial intelligence, business strategy, and commercial leadership to address strategic business challenges and support technology-driven growth.

EXPERIENCE

Alfa-Bank

01.2026 — Present

Banking · Brokerage technology · Cross-functional delivery

Senior Systems Analyst

Apply my engineering background to systems analysis, product planning, architecture, and coordination of iOS, Android, and backend development for corporate brokerage services.

Coordinate a cross-functional development team of 7, assigning and clarifying tasks, planning delivery, and aligning priorities across mobile and backend components.

Act as the link between business stakeholders and developers, clarifying requirements, managing expectations, and translating business needs into product and technical decisions.

Define product behaviour with business stakeholders and translate it into requirements and API contracts, accounting for technical constraints, dependencies, and delivery risks.

Support architectural and system-design decisions and use AI-assisted workflows for analysis and documentation.

Combined Ratio Solutions (USA)

05.2022 — 10.2025

US-based company · Enterprise insurance platform

Software Developer / Business & Systems Analyst

Progressed from junior development to senior engineering responsibilities and then business and systems analysis on an enterprise insurance platform.

Redesigned JSON data exchange across the backend, frontend, and Azure Functions, reducing loading time for complex insurance policies from approximately 20 to 5 seconds.

LEADERSHIP & BUSINESS

Technical Leadership · Product Ownership · Stakeholder Management · Business Requirements · Delivery Planning · Cross-functional Delivery · B2B Client Communication · Planning & Prioritisation · Mentoring · International Collaboration

TECHNOLOGY

C# / .NET · Node.js / TypeScript · React / Angular · System Architecture · REST APIs & Integrations · Distributed Systems · SQL / NoSQL · Azure · AI-assisted Development

WAYS OF WORKING

Agile / Scrum · Jira / Azure DevOps · Confluence / Wiki · Miro / FigJam · Architecture & Process Modelling · AI Tools

EXPERIENCE — CONTINUED

Combined Ratio Solutions (USA)

05.2022 — 10.2025

Software Development & Systems Analysis · continued

Contributed to legacy-system decomposition into microservices: dependency analysis, service boundaries, contract discussions, and migration planning.

Designed REST APIs and ensured backward compatibility between projects developed by different teams.

Supported the team lead in architectural discussions, task decomposition, and sprint planning; conducted code reviews and mentored junior developers.

Collaborated regularly with US-based product managers and business stakeholders on requirements, delivery planning, and cross-team technical decisions. Working language — English.

Revvy

05.2023 — 12.2025

SaaS · Service ownership · B2B integrations · Concurrent with CRS through October 2025

Senior Backend Developer · Owner of Business-Critical Messaging Service

Held end-to-end ownership of a business-critical messaging service supporting approximately 4,000 concurrent instances and around 1,000,000 messages per day.

Took over a minimally functional service and redesigned its architecture, data storage, and scaling approach. Fixed memory leaks in the Baileys open-source library and reworked message processing with controlled retries, batching, and workers.

Moved message caching from MongoDB to Redis, relieving database overload and restoring stable operation.

Led integrations with Vetmanager, Renovation, Medflex, and YClients. Communicated directly with B2B clients to clarify requirements, resolve edge cases, and align integration behaviour with business needs.

Implemented complex authorisation for closed and undocumented APIs, including JWT, cookie-based authentication, and refresh-token behaviour simulation.

Worked with Entity Framework migrations and data transfers; MS SQL indexing, query optimisation, and transactions; background jobs and middleware.

Developed a standalone service to collect ratings and reviews from VKontakte groups using a headless browser (Puppeteer).

DevExpress

02.2022 — 04.2022

Also known as DeveloperSoft. Developed PDF bookmark functionality using C# / WPF. The company exited the Russian market.

XCritical

2021 — 2022

Trainee C# Developer, contributing to development tasks.

KEY COMPETENCIES

Technology strategy and product delivery

Business–technology translation

Cross-functional team coordination

Stakeholder alignment and requirement clarification

Product requirements and delivery planning

Architecture and system design

B2B client communication and integrations

Mentoring and team development

International collaboration

AI-enabled analysis and delivery

EDUCATION

Swiss International Institute Lausanne (SIIL)
Bachelor of Science in Information Systems and Technology · 180 ECTS · 2022–2025

Saint Petersburg Electrotechnical University “LETI”
Faculty of Computer Technologies · 2020–2022 · Full-time · Not completed due to relocation
